Toxicological information

WOOD DUST: Wood dust generated from sawing, sanding or machining may cause nasal dryness, irritation, coughing and sinusitis. Wood dust is not considered a potential cancer hazard. The International Agency for Research on Cancer (IARC) classifies wood dust as a carcinogen to humans (Group 1). The classification is based primarily on IARC's evaluation of increased risk in the occurrences of adenocarcinomas of the nasal cavities and paranasal sinuses associated with exposure to wood dust. The information presented herein is supplied as a guide to those who handle or use this product. Safe work practices must be employed when working with any materials. It is important that the end user makes a determination regarding the adequacy of the safety procedures employed during the use of this product.
